

Monitoring System used by Interreg the Czech Republic - Poland

Warsaw, 7th November 2016

Interreg V-A the Czech Republic - Poland www.cz-pl.eu

Joint Secretariat, Hálkova 2, Olomouc email: is.olomouc@crr.cz

Fulfilling e-Cohesion requirements by Interreg V-A CZ-PL

- Regulatory framework for e-cohesion mainly Article 122.3 Responsibilities of Member States on Management and Control systems (Common Provision Regulation 1303/2013)
- E-Cohesion is implemented in the Programme on the all levels by the monitoring system MS2014+
- MS2014+ is the platform for
 - Applicants and beneficiaries module (ISKP)
 - Administration and control module (CSSF)

MS2014+ - basic information about IS

- Monitoring system MS2014+ is the common system for all EU Programmes in the Czech Republic.
- Whole system is available in both official languages of the Programme Interreg V-A: Polish and Czech.
- All institutions from both sides of the border involved in the implementing structure of the Programme have access to the common system.
- Both modules of MS2014+ (Applicants and beneficiaries module
- and Administration and control module) are fully interconnected and enable mutual communication between the modules as well as between the MS2014+ and SFC (System for Fund Management) (communication with EC, Arachne, OLAF, MF, etc.)

MS2014+ - basic information about IS

- All employees of the implementation structure working with the system (MA, NA, JS, AA, FLC etc.) have to absolve a training for system users (no training certificate = no access).
- All Partners have to verify their identity by a qualified electronic signature (obligatory for applying, sending reports and requesting for payments).
- Almost all documents of whole project process are electronic!!!
 No obligatory paper version = ecological approach

How do we use MS2014+ in the project cycle

- The first step proposal of the project (outside the MS2014+, a form available on the Programme website).
- The second step full application form (in Applicants and beneficiaries module of MS2014+).
- The third step control of eligibility by JS (in Administration and control module of MS2014+).
- The fourth step assessment process realized by Common Panel of Experts (experts have limited access to the MS2014+, results of CPE assessment are transfered from a paper form into the MS 2014+ by JS managers).

How do we use MS2014+ in the project cycle

- The fifth step approval of projects by Monitoring Comitee (MC decisions are transfered into the MS 2014+ by JS managers).
- The sixth step Agreement / Decision signing (administrated by JS managers); FLC institution on both sides of border get the access to project in MS2014+.
- The seventh step realisation of the project implementation reports, payment requests, requests for a change, public procurements

Project proposal

• The first obligatory step of applying in a call announced in the Programme is submitting the Project proposal. The proposal is processed outside the MS2014+ and contains basic information about project: partners, key activities, indicators, budget, descriptions of cross-border cooperation and impact.

HOW DOES THE PROCESS LOOK LIKE:

- The Lead Partner fills in an easy online form on the Programme website.
- JS managers prepare an opinion in a electronic form and send it by email to the Lead Partner.
- JS opinion is not an assessment, it is only recommendation that can be reflected in the full application form.

Project proposal form – quick registration

PŘEKRAČUJEME HRANICE PRZEKRACZAMY GRANICE 2014—2020		Přihlásit do správy projektových záměrů Zalogować się do administratora Propozycji projektu

Full project application form

- The basic tool for preparing a full project application form is **ISKP** system (Applicants and beneficiaries module of MS2014+).
- This system is used for all EU Programmes managed by the Czech Republic (MA for Interreg V-A CZ –PL is Ministry for Regional Development CZ, JS is part of this Ministry, NA is Ministry for Development PL).
- Varieties of ISKP used for particular Programmes have specific modifications, however all of them provides data transfer to Administration and control module and SFC.

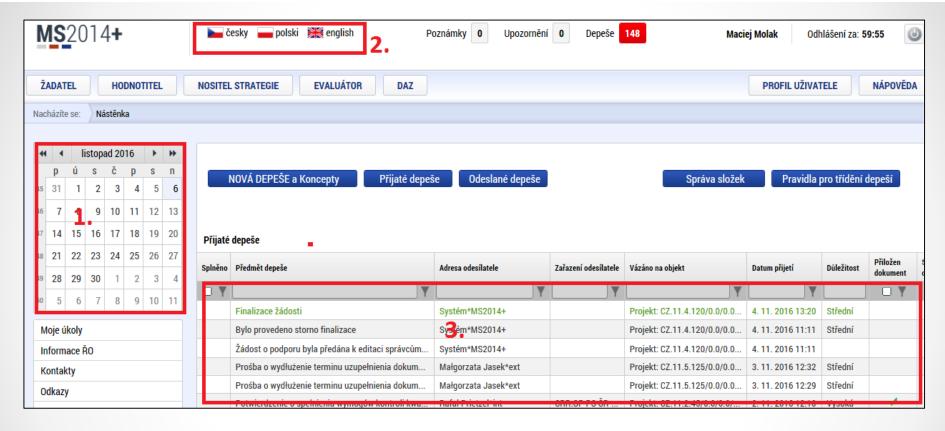

Full project application form

• The system is connected with Czech national databases eg. Registry of the economical subjects, and enable the data verification.

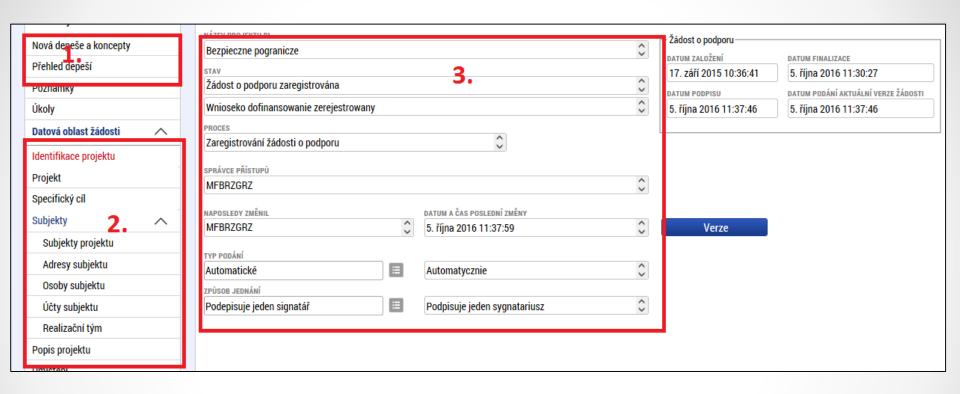

- 1. The calendar important terms for the applicants and beneficiaries
- 2. Languages panel
- 3. Communication system between the implementing institutions and applicantas and beneficiaries. The official and **only** way to communicate.

Project level

- 1. Communication system
- 2. All information about project (identification data, partners, project decription, budget etc.)
- 3. Specification of each part of the application form

Joint Secretariat, Hálkova 2, Olomouc email: js.olomouc@crr.cz

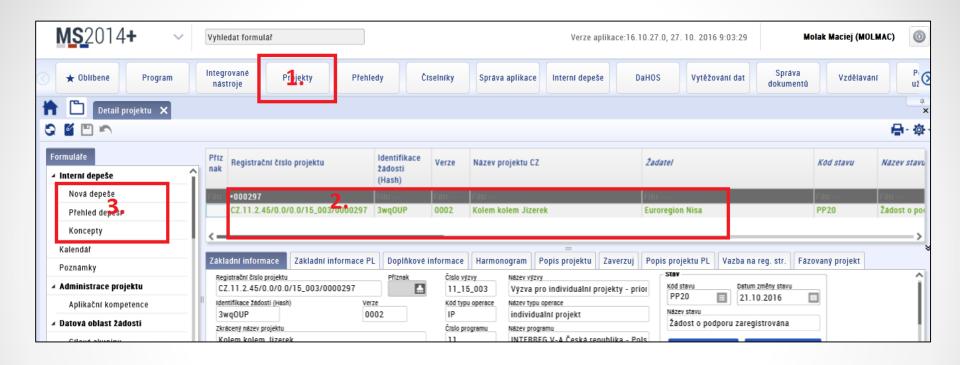

Checking of eligibility by JS and the assessment of projects

- JS and experts for assessment of projects are using Administration and control module of the MS2014+ system.
- This module is directly connected with ISKP module and SCF. It is a basic communication tool in the Programme. All messages, decisions in the process of applying, administration and assessment are operated by MS2014+.

- 1. The projects benchmark
- 2. Project database
- 3. Communication system common for all system modules

Common Panel of Experts

- Experts (4 for each project) use the MS2014+ (Administration and control module) to browse the projects and download documents. They make the individual assessment in paper form in advance.
- Experts meet together at Common Panel of Experts (in Olomouc) and make the common final assessment of the projects. The assessment is administrated in MS2014+ by JS managers.

Projects approval act by Monitoring Comitee

- Members of MC do not use the system for their work. All materials for making decision by MC are prepared by JS and provided via official website of the Programme (access to secured section for MC members).
- The results of MC decisions are transferred to MS2014+ by JS.

Agreement / Decision signing

- The Agreement / Decision about the project funding is signed in paper version (different law frame in PL and CZ paper version is accepted by law system of both countries, electronic version only by the Czech law system).
- After contracting is made project available for FLC institutions (Payments, Public Procurements etc.).

Realisation of the project

- Implementation reports
 - Each project partner has to report on implementation, after the approval of partner reports the common report is done by the Lead partner
 - o Reports are written in ISKP (Applicants and beneficiaries module) and administrated and approved in CSSF (Administration and control module)
 - o All partner need a qualified electronic signature to verify their reports
 - o Reporting usually in a 6 month period
- Payment requests
 - o There is a specific modul of MS for payments
 - After the approval of the report on implementation and the expenditure list directly in MS by FLCs it is possible to approve a payment request too
 - MS is interconnected with the system of the Ministry of Finance for sending payments to the Lead partner

Realisation of the project

- Requests for a change
 - Anytime during the project realisation it is possible to request for a change in the project
 - All changes are administrated in the MS insignificant (decided by FLCs or JS) and the significant ones (decided by MA or MC)
 - There is a specific modul of MS for changes (submitted in ISKP and administrated and approved in CSSF again)
 - The requests are administrated mainly by the Change List (a word document sending by the MS communication system between beneficiaries, FLCs, JS and MA)
 - After the approval of the request non-financial changes are automatically changed in the project application

Realisation of the project

- Public procurements
 - There is a specific modul of MS for public procurements (accessible in ISKP and CSSF again)
 - It si possible to administrate public procurements independently of the project cycle phase (even when other parts of the project aplication are not editable by the applicant/beneficiary), according different national laws

Main advantages of MS2014+ system

- All documents are available at one system
- Faster administration for all participants of project cycle
- Ecological aspects
- Access to projects from anywhere
- Connection with national databases
- Lower costs of project preparation for the applicants (it is not necessary to visit JS in the process of applying and controlling)

Main disadvantages of MS2014+ system

- Still in development (system is not working perfectly, testing, etc.)
- Hard to keep the system in both languages actual (adding new functionalities, upgrades, a lot of new data)
- Sometimes problem with servers connection capacity
- Differences in national law systems eg. VAT rates, limits for Public Procurements → the system had to be adapted especially for our Programme

THANKS FOR YOUR ATTENTION

DZIĘKUJEMY ZA UWAGĘ

DĚKUJEME ZA POZORNOST
